

IBC SPILL PALLET PLUS SPECS

SPILL CONTAINMENT

Drain	Colors	Length	Width	Height	Weight	Load Capacity UDL	Sump Capacity
No	yellow	62"	28"	62"	320 lbs	8,500 lbs	365 gallons
Yes	yellow	62"	28"	62"	320 lbs	8,500 lbs	365 gallons

Description: A containment sump with deck surface used for storing and containing any leaks, spills or drips from Intermediate Bulk Containers (IBC's).

Application: Contain leaks, spills or drips from IBC containers.

Product Features:

- 28" high — lower profile for easier access and dispensing
- All-poly construction — chemical-resistant, won't rust or corrode
- Full, flat grate deck surface (52" x 52") — easy to position IBCs; no open voids in surface
- Compact 62" x 62" footprint • 8500 lb. UDL weight capacity
- 2-way forklift entry for easy movement when not loaded
- Available with optional drain
- Available with optional bucket shelf to capture spills from dispensing

Composition: Polyethylene

Helps you comply with: Meets SPCC and EPA Container Storage Regulation 40 CFR 264.175 Spill Containment Regulations.

Disclaimers:

Flammables Notice: If using this product with flammable liquids, please consider the regulations that apply to storage and handling of flammable liquids and the safety of this application, specifically flammable vapors, static discharge and heat sources.

Forklift Pockets:

Forklift Pocket Dimensions for:
Ultra-IBC Spill Pallet, Plus Model

IBC SPILL PALLET PLUS BUCKET SHELF ATTACHMENT

SPILL CONTAINMENT

Color	Length	Width	Height	Weight	Capacity	Composition
Black	16"	19"	13"	9 lbs	5 gallons	LDPE

Attach this shelf to your IBC Spill Pallet for easy, mess free filling into 5-gallon buckets.

- Bucket shelf attaches directly to IBC Spill Pallet for easy filling of 5-gallon pails
- Catches leaks and drips during dispensing to keep floors dry and safe
- For more containment, shelf can be connected to main sump; optional configuration requires bulkhead fittings

Disclaimers:

Flammables Notice: If using this product with flammable liquids, please consider the regulations that apply to storage and handling of flammable liquids and the safety of this application, specifically flammable vapors, static discharge and heat sources.

MAINTENANCE/CARE

POLYETHYLENE SPILL CONTAINMENT PRODUCTS

SPILL CONTAINMENT

1. There is no specific need to clean one of our polyethylene spill containment products that has not had a spill or leak as the polyethylene plastic material it is constructed from is designed to last for years in most indoor or outdoor environment. The polyethylene has a UV protective additive for prolonged outdoor exposure.
2. The products are rated for use in temperatures from -40° F to 160° F.
3. The sump area of the product should be inspected weekly for any spills or leaks. If a spill or leak is discovered, it should be cleaned up within 24 hours. If inspection shows the sump area has a crack or hole or other damage that could affect the functionality of the unit, it should be immediately removed from service.
4. To clean up a spill or a leak, use all safety precautions required for handling the particular chemical involved. Using a safe pumping method for the chemical involved, pump the spilled contents out of the containment sump and into a drum or container for proper disposal or reuse. If the chemical involved is not safe to pump, use absorbents or other means to remove the chemical from the containment sump safely. Dispose of any chemicals, used sorbents or other disposables in compliance with your local or federal regulations.
5. Once the chemical has been removed, use a sorbent mat or pad to wipe down the inside of the containment unit to remove any remaining chemical residue. Finish by washing with soap and water and allow the unit to dry before placing back into service.
6. The unit's grating should be cleaned of any residual chemical and cleaned with soap and water.
7. If the unit had a drain plug that was removed to drain off any chemical or soap/water, be sure to replace the drain plug securely.
8. Spill Deck Bladder System special instructions:
 - a. Use a hand pump with a ½" diameter tube and insert the tube into the opening of the bladder from inside the Spill Deck after removing the grate.
 - b. Pump the contents of the bladder and the Spill Deck into a drum or container for proper disposal or reuse.
 - c. If there is some remaining residue inside the bladder, lift the outside end of the bladder and allow the residue to pour back into the Spill Deck sump where it can be pumped out or absorbed with sorbents.
 - d. Remove the bladder from the Spill Deck by uncrewing the bulkhead fitting and dispose of the bladder properly according to local and federal regulations. **DO NOT REUSE A BLADDER.** After the Spill Deck has been cleaned up, place a new bladder into the Bladder Attachment and attach it to the Spill Deck following the instructions that accompany the replacement bladder.

CHEMICAL COMPATABILITY

POLYETHYLENE SPILL CONTAINMENT PRODUCTS

SPILL CONTAINMENT

This listing was prepared to provide guidance to the chemical compatibility of Ultra Environmental Containment Products which are manufactured and constructed of a molded polyethylene.

Polyethylene is susceptible to attack by some chemicals which may cause stress cracking, swelling, oxidation or may permeate the polyethylene. These reactions may reduce the physical properties of polyethylene.

When considering an UltraTech polyethylene product for use in secondary containment applications, it is important to note that most secondary containment products are designed to hold leaked chemicals for only hours, a day, at most a week. These secondary containment units would then be cleaned of any chemical. In these short term applications, a greater variety of chemicals may be used with the polyethylene since the exposure time of the chemical to the polyethylene is limited.

- A. Suitable for long term storage at 100 degrees F or less.
- B. Suitable for short term storage less than one year.
- C. Do NOT store these chemicals in UltraTech containers.
- D. User testing may prove some of these chemicals are suitable for secondary containment applications with exposure time of one week or less.

Acetaldehyde (40%), A	Ammonium Nitrate Sat'd, A	Benzene Sulfonic Acid, B
Acetamide, A	Ammonium Persulfate Sat'd, A	Benzene, B
Acetic Acid (50%), A	Ammonium Phosphate, A	Benzoic Acid, A
